

CORROSION BLOCK®

**Pressure Gages
Motor Operated Valves
Electronics
Fuse Panels
Terminal Strips
Fan Motors
Circuit Boards
Intercom Systems
Solenoids
Junction Motors
Switches
Circuit Breakers
Valves
etc...**

INDUSTRIAL STRENGTH PROTECTION

Corrosion Block's hard working anti-corrosion chemistry protects your fleet assets against the destructive forces of moisture and salt.

Corrosion Block's unique properties work especially well on all electrical components including the LED lighting, and GPS systems found in today's trucks. Treating wire harnesses, connectors, battery posts, and other components a few times a year will prevent costly down time...increasing productivity and profitability.

Other proven applications for Corrosion Block include tank straps, and aluminum wheel and hubs. Corrosion Block is a money saver for all fleet environments from line haulers to buses, from heavy construction equipment to salt spreaders, and is ideal for vehicles that run in coastal or winter road conditions. Simply adding Corrosion Block to your fleets maintenance schedule will extend service intervals, and reduce down time...adding to your bottom line!

Corrosion block is available through leading automotive distributors, and leading retailers. To find out more about the Corrosion Block family of products and programs, please call 1-800-BLOCK- IT (256-2548) or log onto www.corrosionblock.com
